

# Energy One Acrylic Windows

## How It Works...

A lightweight and flexible panel seals magnetically and fits over the inside of your existing window.

The magnetized gasket on your refrigerator door seals tight to keep the cold air inside. Magnetic windows also seal with a magnetized gasket, keeping cold air out in the winter and hot air out in the summer.

The windows in commercial aircrafts are made of clear acrylic panels to reduce noise and prevent breakage. Magnetic windows are made of this same 100% acrylic.

The dead air space in a Thermos® bottle separates the temperature of the liquid inside from the surrounding temperature outside. Magnetic windows form a dead air space too, making the home or office comfortable all year long.

## ⚡ SEALS MAGNETICALLY! ⚡

**Any Size, Any Shape • Easy, Quick Installation**

**Perfect for Historic Homes**

(keep your same historical look inside and out)

**Works WITH Existing Windows • Blocks Harmful UV Rays**
